

Collision List Policy

Desi Networks, LLC

Version 2, October 2014

Objective: The objective is to articulate the Desi Networks, LLC policy for the registration, delegation, and handling of .desi domain names on the ICANN Collision List.

Registrations: Accredited registrars may register the .desi domain names on the ICANN Collision list. The names on the Collision list are on a ServerHold until the required DNS Controlled Interruption period completes. Refer to ICANN's policy on name collision at: <https://www.icann.org/resources/pages/name-collision-2013-12-06-en>

On November 19, 2014 06:00:000 UTC, the ServerHold on the .desi name collision list will be released. The Registry reserves the right to change this in accordance with any changes to ICANN policies and guidelines. The Registry also reserves the right to change the pricing during this or any other period.

Registrar is liable for the application fees and any potential auction fees as well as the minimum term registration fees. Prior to accepting a registration request for a domain name contained on the ICANN Collision List Registrar must inform registrant that the domain name may not be activated for an undetermined time.

Delegation: The .desi ICANN Collision List names may NOT be activated until the DNS Controlled Interruption period completes.

Registrar and Registrant Risks. The risk is wholly upon the registrars and registrants on registering the ICANN Collision list names. All fees (application, registration, auction) are non-refundable. There is potential risk that a registered ICANN Collision List name may NEVER be allowed to be delegated.

Any questions that you have about this policy should be directed to:
